

David Crockett

Sustainability Features

Energy Efficient Cabins

David Crockett features seven new cabins near beautiful Lindsey Lake. Each cabin is completely furnished with two bedrooms, two baths and a full kitchen and a covered patio. These unique modern accommodations were designed and built with energy efficiency in mind. They are the first Leadership in Energy and Environmental Design (LEED) certified vacation homes in the eastern United States and cabins available at a state park.

The cabins demonstrate how to lessen the environmental impact of a home, both during and after construction, by incorporating proper stormwater construction management, geothermal heating and cooling, high performance water devices and high efficiency appliances. Additional sustainability efforts associated with the cabins include: a recycling program, a linen policy, chemical and supply use, preventive facility maintenance, and committed improvement plans.

Green Certified Restaurant

The restaurant at David Crockett State Park, along with the cabins, has been Tennessee Green Hospitality Certified by the Tennessee

Hospitality Association. At the time of certification, the cabins and restaurant were two of only 40 certified facilities in the state to achieve this standard. One particular program the restaurant participates in is the recycling of its cooking grease to be used as an alternative fuel source.

Did You Know?

David Crockett State Park was the first state park funded entirely by the citizens of the State of Tennessee

Park Highlights

- Located in Lawrence County
- Visited by more than 560,000 people in 2011
- There are more than 6 miles of hiking trails
- There is a 2.3 mile paved bike trail

Interpretive Center

This educational center provides historical, cultural and nature programming during the summer months to park visitors. The center was built to resemble a gristmill similar to one David Crockett himself owned and operated during his time in middle Tennessee.
